

Write a Python program that:

1. Asks the user for a full sentence.
2. Splits the sentence into words using `split()`.
3. Reverses the order of words using slicing (`[::-1]`).
4. Joins the reversed words back into a sentence using `join()`.
5. Formats the sentence to title case using `title()`.
6. Removes leading/trailing whitespaces using `strip()`.
7. Prints the original and manipulated sentences.
